Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	4 Marks

Empathy Map:

"An Empathy Map helps understand farmers' needs, thoughts, feelings, and actions. For the OptiCrop – Crop Recommendation System, it identifies farmer challenges and supports better crop recommendations using Machine Learning." Use modern flat-design icons, bright colors, rounded cards, connecting lines, and a clean A4 portrait layout suitable for a college project report.

THINKS

- Which crop is most suitable for my soil?
- Will the recommended crop give me a higher yield?
- Can I earn more profit from this crop?
- Is my soil nutrient level suitable for cultivation?
- How will weather conditions affect my crop growth?

FEELS

- Worried about crop failure due to wrong decisions.
- Confused because of changing weather conditions.
- Stressed about financial losses if the crop fails.
- Hopeful that technology can improve farming decisions.
- Confident after receiving accurate crop recommendations.

SAYS

- I need the best crop recommendation for my land.
- I want higher productivity and better profits.
- I need reliable and accurate farming advice.

- Help me reduce farming risks and costs.
- I want a simple and easy-to-use recommendation system.

DOES

- Collects soil information such as NPK values and pH.
- Checks weather conditions like temperature, humidity, and rainfall.
- Enters the required data into the OptiCrop application.
- Reviews the crop recommendations provided by the system. □ Selects and cultivates the recommended crop.

PAINS

- Difficulty in choosing the right crop.
 - Unpredictable weather affects crop growth.
 - Low yield due to incorrect crop selection.
 - Financial losses caused by poor farming decisions.
 - Limited access to agricultural experts and guidance.
-
- Receives accurate crop recommendations using Machine Learning.
 - Improves crop productivity and overall yield.
 - Increases profitability by selecting suitable crops.
 - Reduces farming risks through data-driven decisions.

- Makes better use of soil nutrients and water resources. □
- quick recommendations.
